# WEEKLY HEALTH REPORT

## NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

### MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on a duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

### MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

### STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

### EXPLANATORY MATTER

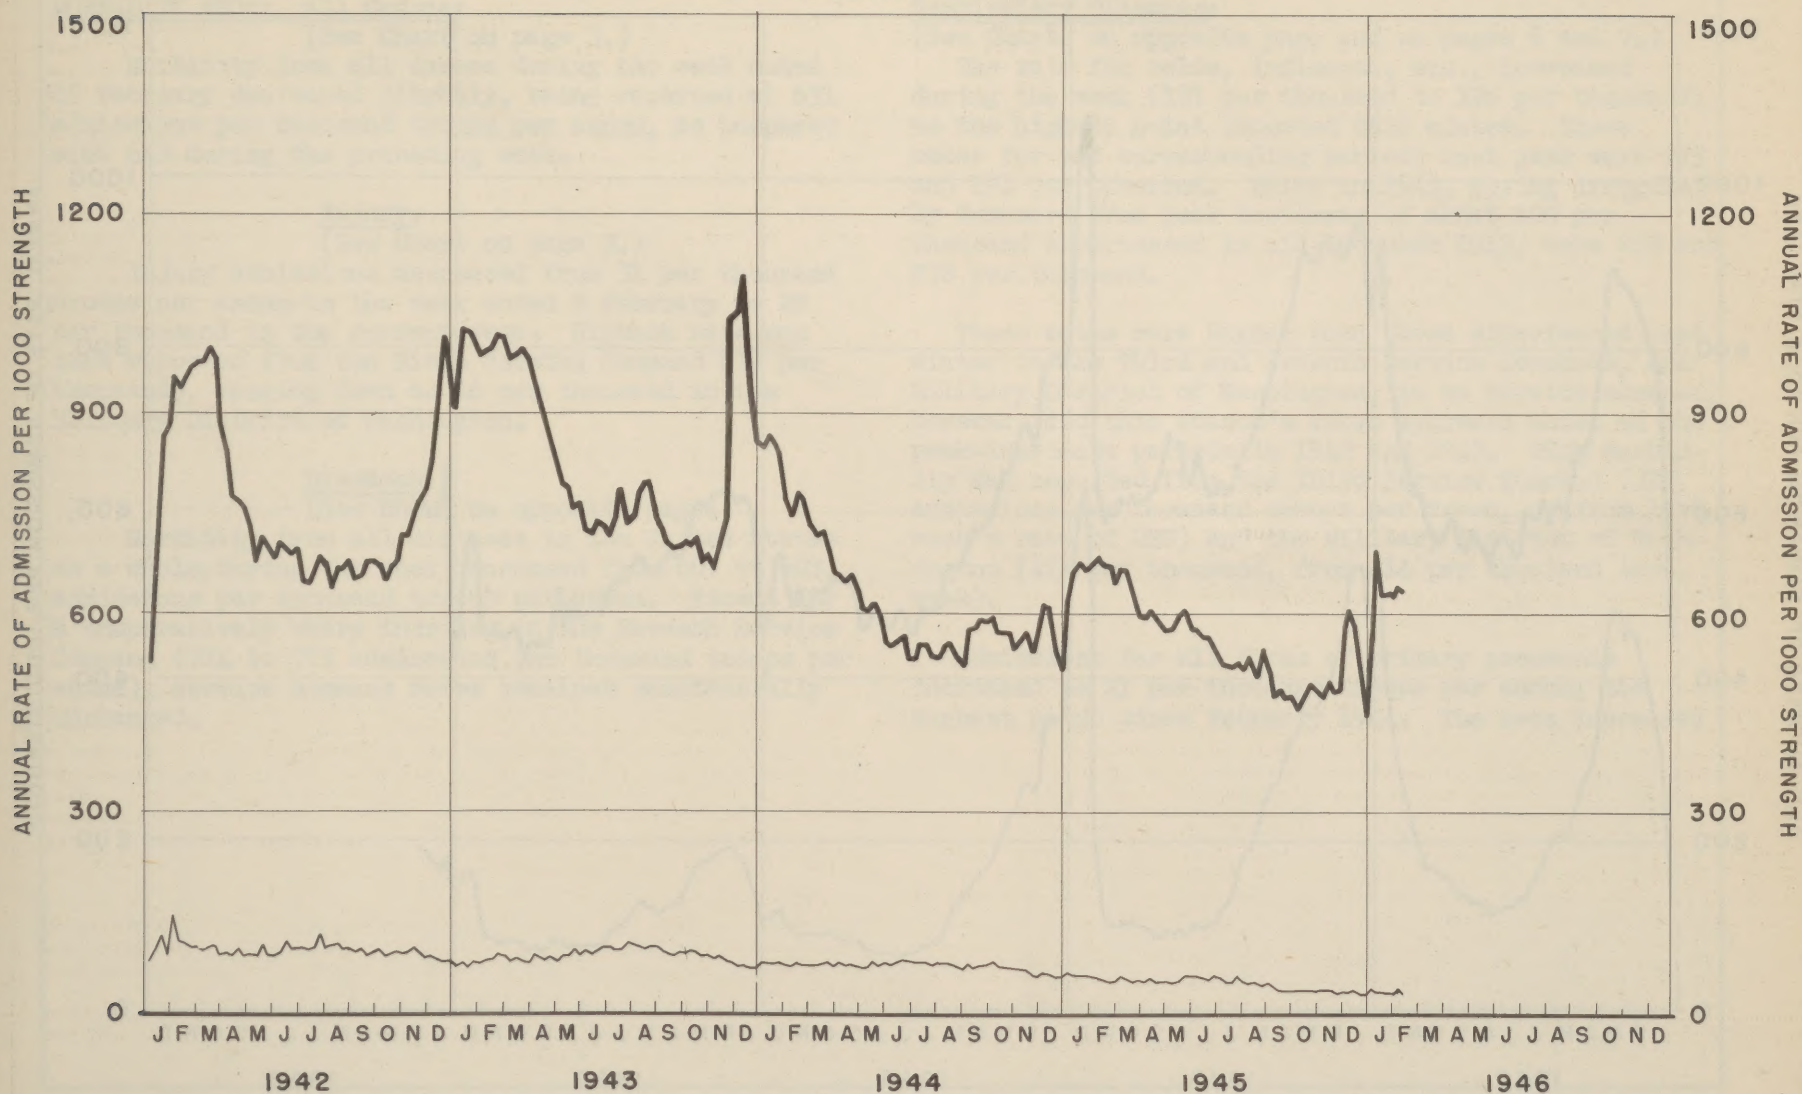

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (#) is placed after the name of the station.

## COMMENT ON CURRENT TRENDS

MORBIDITY FROM: All Causes:

(See Chart on page 3.)

Morbidity from all causes during the week ended 15 February decreased slightly, being reported at 631 admissions per thousand troops per annum, as compared with 640 during the preceding week.

Injury:

(See Chart on page 3.)

Injury admissions decreased from 31 per thousand troops per annum in the week ended 8 February to 28 per thousand in the current week. Highest rate was that reported from the Ninth Service Command (39 per thousand), ranging down to 16 per thousand in the Military District of Washington.

Diseases:

(See Chart on opposite page.)

Morbidity from all diseases in the United States as a whole during the week decreased from 609 to 603 admissions per thousand troops per annum. Except for a comparatively sharp increase in the Seventh Service Command (724 to 773 admissions per thousand troops per annum), service command rates remained substantially unchanged.

Respiratory Diseases:

(See Charts on opposite page and on pages 6 and 7.)

The rate for colds, influenza, etc., increased during the week (191 per thousand to 196 per thousand) to the highest point reported this winter. These rates for the corresponding periods last year were 193 and 191 per thousand. Rates in 1944, moving irregularly downward from peak incidence of about 600 per thousand experienced in mid-December 1943, were 263 and 278 per thousand.

These rates were higher than those experienced last winter in the Third and Seventh Service Commands, and Military District of Washington; in no service command, however, did this season's rates approach those of the peak-incidence periods in 1942 and 1943. High morbidity was reported from the Third Service Command (328 admissions per thousand troops per annum, up from last week's rate of 288) and the Military District of Washington (411 per thousand, from 414 per thousand last week).

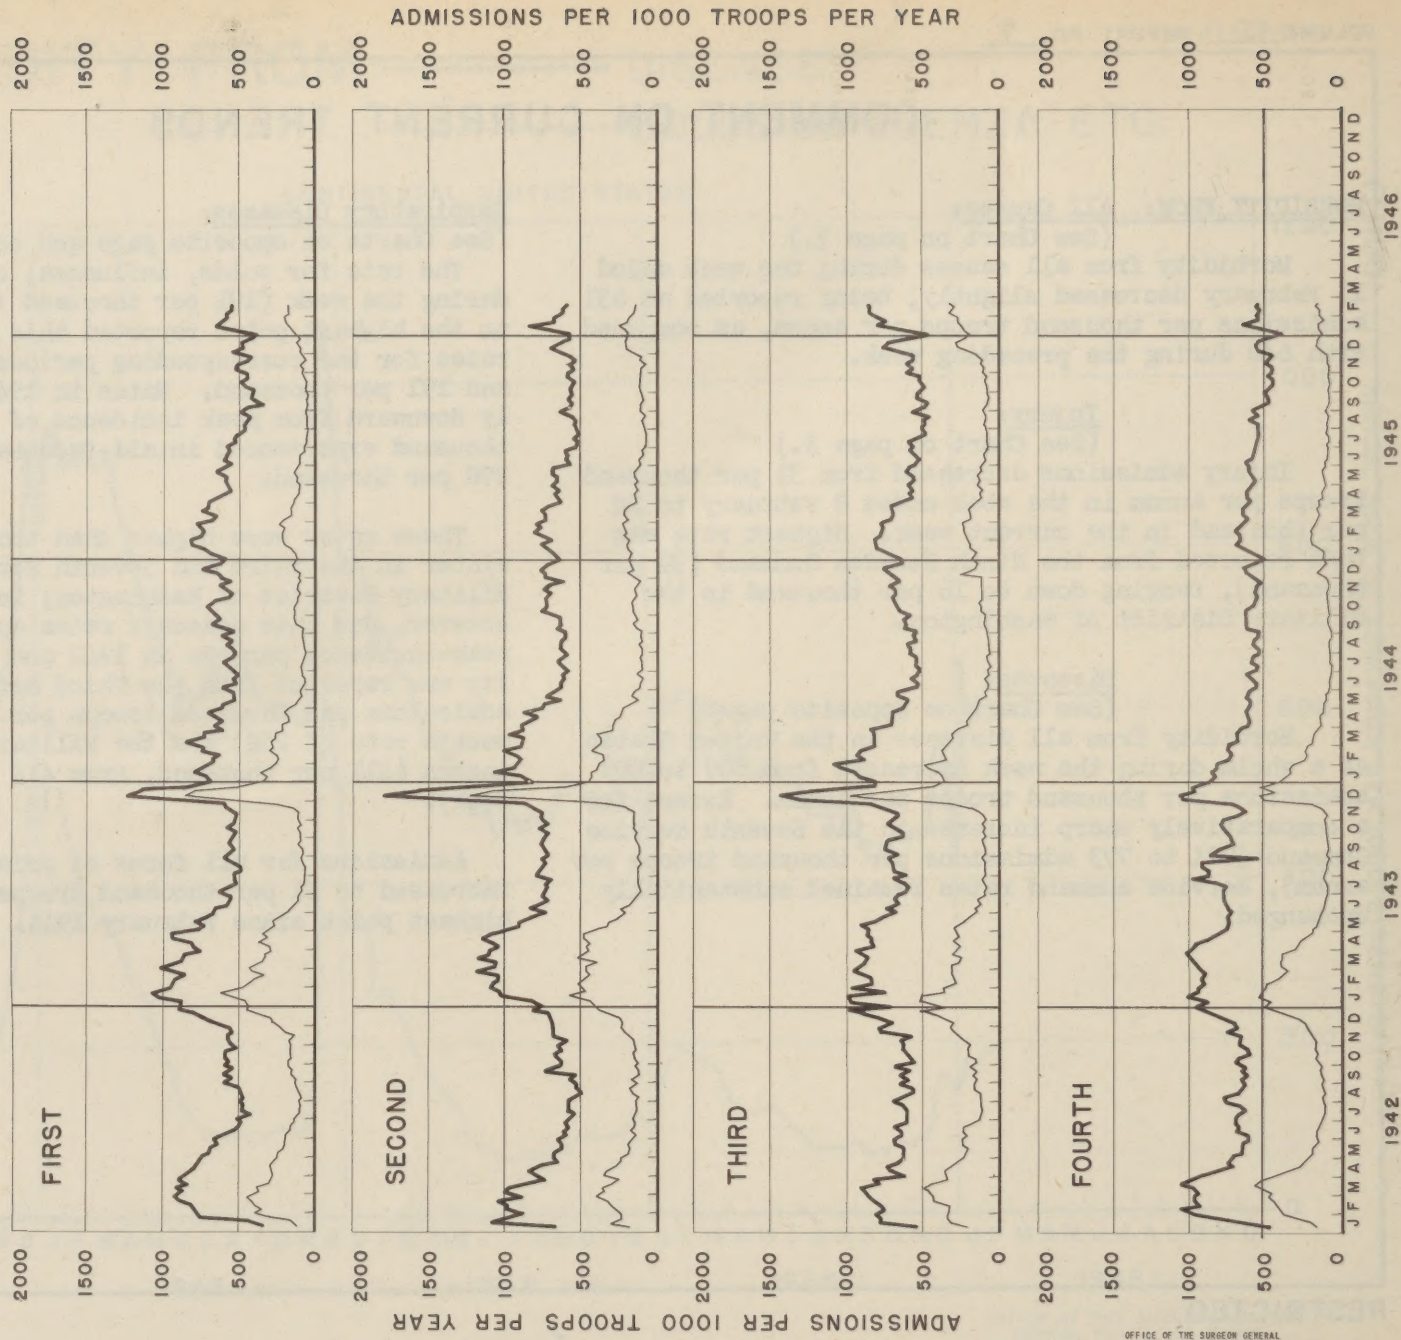

Admissions for all forms of primary pneumonia increased to 21 per thousand troops per annum; the highest point since February 1944. The rate increased

# VARIATIONS BY SERVICE COMMAND

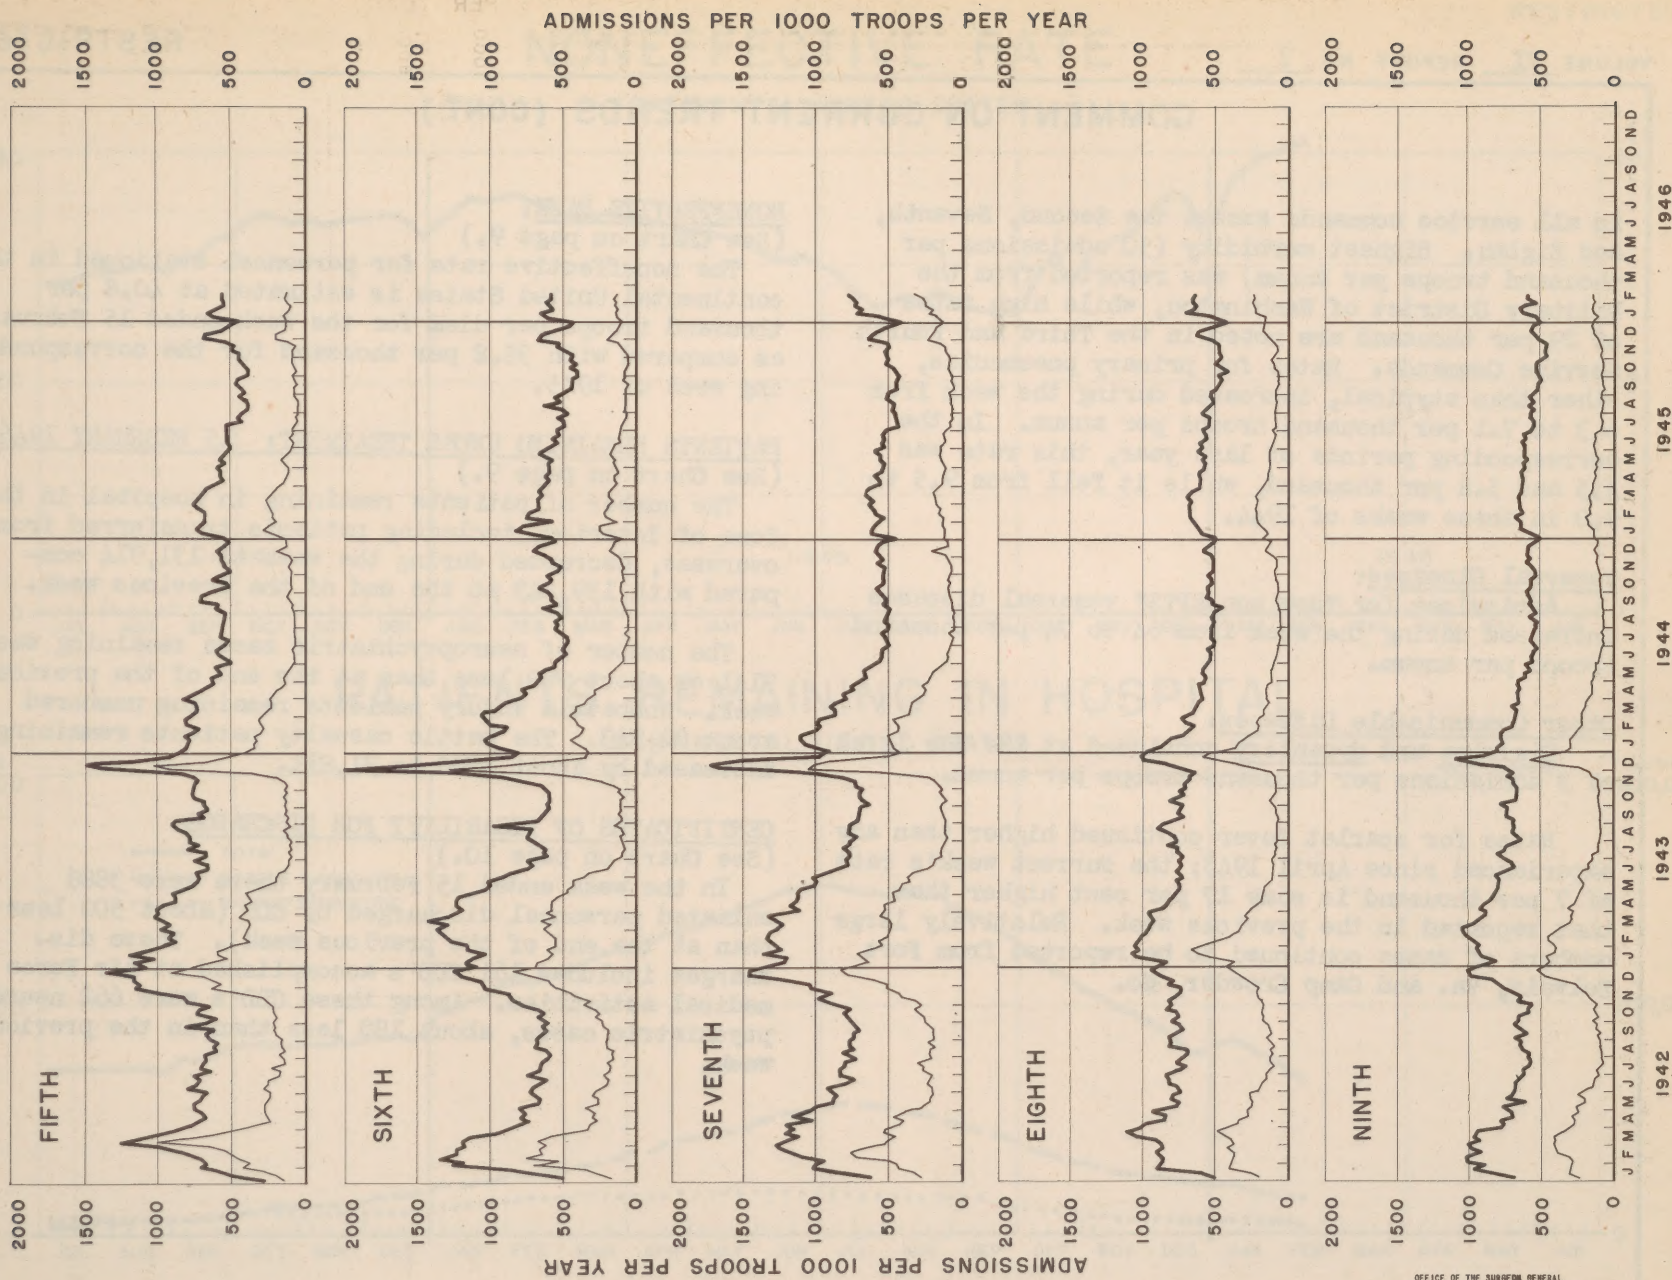

## MORBIDITY FROM

— ALL CAUSES  
— COLDS, INFLUENZA, ETC.

# VARIATIONS BY SERVICE COMMAND (CONT.)

## COMMENT ON CURRENT TRENDS (CONT.)

in all service commands except the Second, Seventh, and Eighth. Highest morbidity (50 admissions per thousand troops per annum) was reported from the Military District of Washington, while high rates of 29 per thousand are noted in the Third and Fourth Service Commands. Rates for primary pneumonias, other than atypical, increased during the week from 6.3 to 7.1 per thousand troops per annum. In the corresponding periods of last year, this rate was 4.5 and 5.8 per thousand, while it fell from 9.5 to 9.0 in these weeks of 1944.

Venereal Diseases:

Admissions for "new non-EPTS" venereal diseases increased during the week from 64 to 74 per thousand troops per annum.

Other Communicable Diseases:

Diarrhea and dysentery continued at the low level of 3 admissions per thousand troops per annum.

Rates for scarlet fever continued higher than any experienced since April 1943; the current week's rate of 7 per thousand is some 17 per cent higher than that reported in the previous week. Relatively large numbers of cases continued to be reported from Fort Belvoir, Va. and Camp Crowder, Mo.

NONEFFECTIVE RATE:

(See Chart on page 9.)

The noneffective rate for personnel stationed in the continental United States is estimated at 40.8 per thousand troops per diem for the week ended 15 February as compared with 35.8 per thousand for the corresponding week of 1945.

PATIENTS REMAINING UNDER TREATMENT: 15 FEBRUARY 1946:

(See Chart on page 9.)

The number of patients remaining in hospital in the Zone of Interior, including patients transferred from overseas, decreased during the week to 131,914 compared with 139,243 at the end of the previous week.

The number of neuropsychiatric cases remaining was 9141 or about 700 less than at the end of the previous week. Nonbattle injury patients remaining numbered about 22,743. The battle casualty patients remaining decreased by about 1700 to 31,811.

CERTIFICATES OF DISABILITY FOR DISCHARGE:

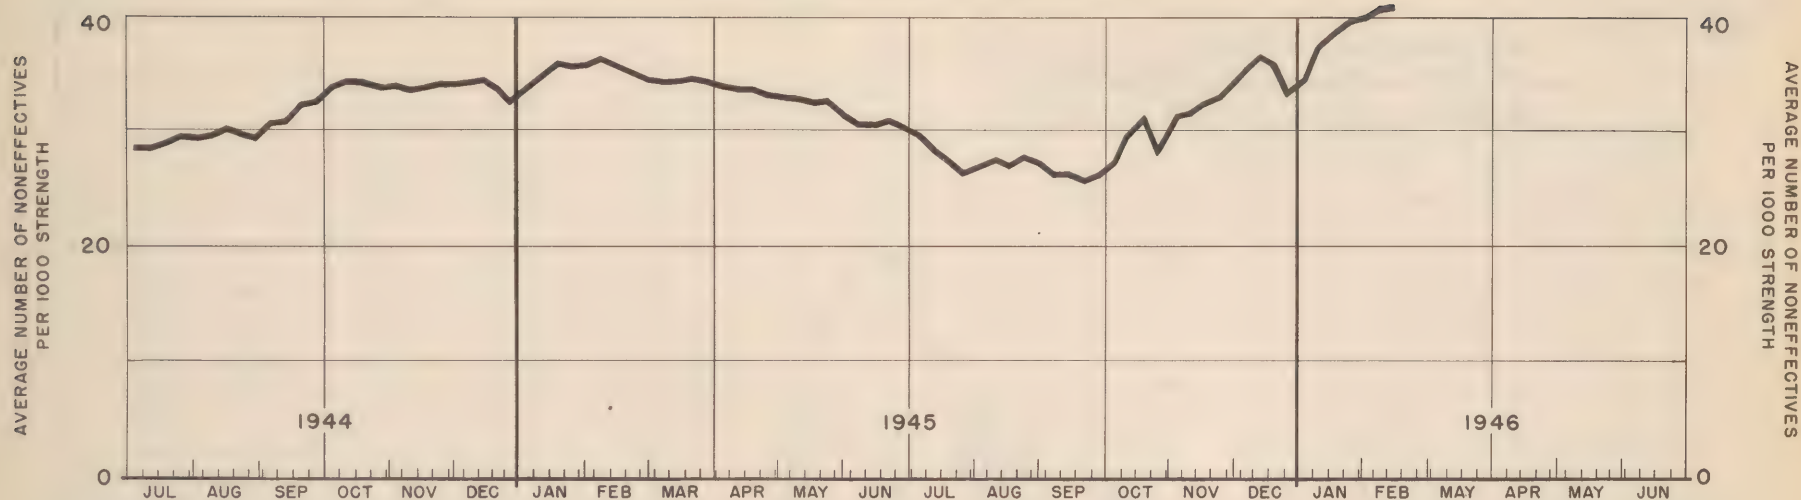

(See Chart on page 10.)

In the week ended 15 February there were 3888 enlisted personnel discharged by CDD (about 500 less than at the end of the previous week). These discharges included 161 CDD's accomplished at Air Force medical activities. Among these CDD's were 662 neuropsychiatric cases, about 180 less than in the previous week.

## COMMENT ON RECENT DEVELOPMENTS

FOR THE FOUR-WEEK PERIOD ENDED 25 JANUARY 1946

NATURE OF THE DATA:

The data of this Monthly Report, like those of the Weekly Health Reports, have been taken from WD AGO Form 8-122 rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. However, unlike the Weekly Health Reports which are compiled on the basis of the figures as received, so as to place the information in circulation at the earliest possible time, the figures here presented for the four-week period ended 25 January 1946 include the great majority of the corrected reports as well as reports received too late to be incorporated in the Weekly Health Report.

This report covers morbidity and mortality data for all individual stations with a strength of 1000 or over and gives details for admissions from venereal diseases and for neuropsychiatric cases.

Charts showing morbidity trends from all causes, from all diseases combined, from injury, and from colds, influenza, etc., are presented on page 23. Similar charts for specified diseases appear on pages 25 and 26. A chart showing mortality trends is presented on page 29. A summary for the month of the number of admissions and corresponding morbidity rates and of the number of deaths and corresponding mortality rates for the United States as a whole and for the service commands is given on pages 30 and 31. The most pertinent morbidity data for individual stations are presented on pages 32 to 47. On pages 48 and 49 the seven stations with the highest rates of admission during the month are shown for each of the morbidity categories considered.

In reading the detailed tables, it should be borne in mind that morbidity (or mortality) rates based on small numbers of cases are not reliable. For this reason the symbol "?" has been placed after rates computed on the basis of 5 or fewer cases. Attention is invited to the definitions of admissions and admission rates and the discussion of the proportion of total Army strength included in the stations covered by this report as given on page 2. The term "month" in this report is used to denote the four or five-week period based on the number of Fridays in the calendar month.

MORBIDITY FROM ALL CAUSES, DISEASE, AND INJURY:

The admission rate for all causes for the Army in the continental United States increased to 630 during January, as compared with 535 for the previous month. The rate for diseases increased to 600 per thousand per annum, while that for injuries rose from 29 in December to 30 in January.

Disease admission rates increased during January in all service commands, the sharpest rise (34 per cent), being reported from the First Service Command.

The admission rate for injury increased in all service commands except the Fifth, where it remained unchanged. Highest morbidity was reported by the Eighth and Ninth Service Commands, with rates of 34 and 38 per thousand, respectively.

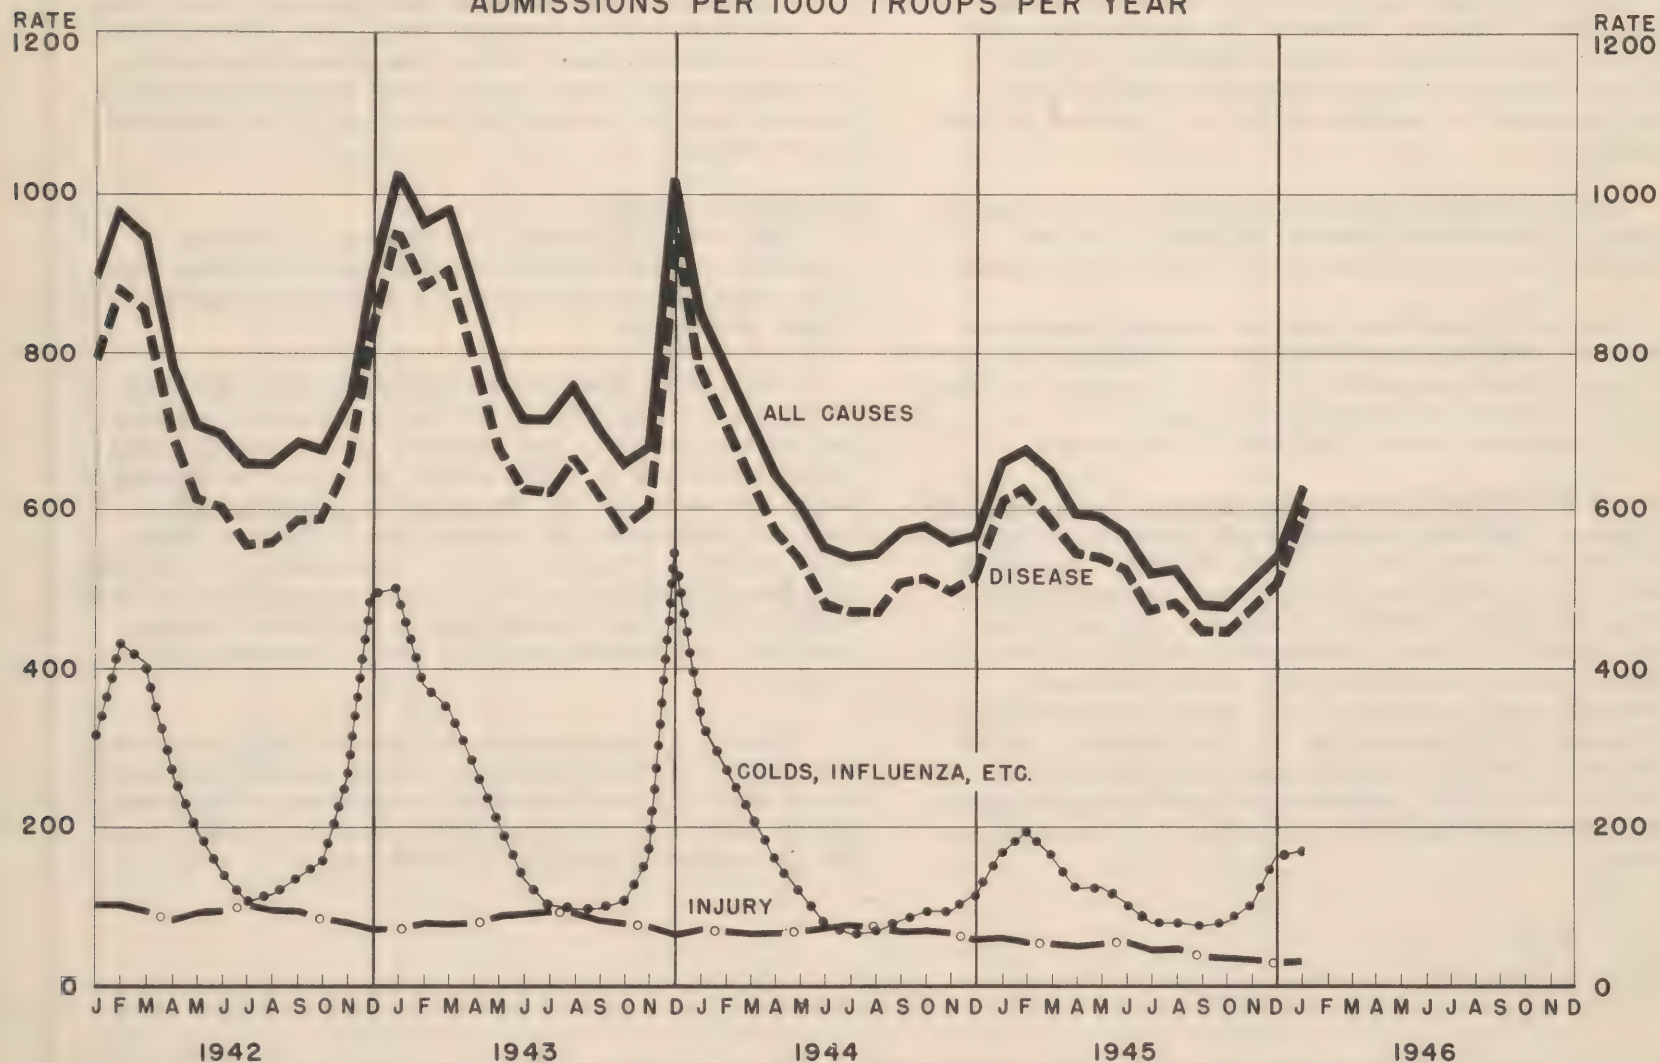

# MORBIDITY FROM ——— ALL CAUSES ——— DISEASE

## ——— INJURY ——— COLDS, INFLUENZA, ETC.

CONTINENTAL UNITED STATES

ADMISSIONS PER 1000 TROOPS PER YEAR

## COMMENT ON RECENT DEVELOPMENTS (CONT.)

RESPIRATORY DISEASES:

During January the admission rate for common respiratory diseases increased by about 8 per cent (160 per thousand to 172 per thousand). A rate of 167 per thousand was reported for January 1945, while the rate in the same month of 1944 was 341 per thousand.

The lowest rate (125 per thousand) was reported by the Fifth Service Command; highest (328 per thousand) from the Military District of Washington.

Morbidity from all forms of primary pneumonia increased from 13.4 per thousand in December to 15.5 in January, as compared with 12.8 in January of last year. Increases in these rates took place in all service commands except the Fourth and Fifth.

Morbidity from primary pneumonias (atypical) in the United States as a whole moved from 9.1 admissions per thousand troops per annum in December to 9.5 in January, with decreases being noted in the Fourth, Fifth, and Eighth Service Commands. The rate for other forms of primary pneumonia rose in all service commands except the Second (where it remained unchanged), while the national rate increased from 4.3 per thousand in December to 6.0 in January. In the First and Sixth Service Commands and the Military District of Washington, January rates were approximately twice those experienced in December for these pneumonias.

DIARRHEA AND DYSENTERY:

Morbidity from diarrhea and dysentery rose from 3.6 per thousand in December to 4.3 in January, the rates continuing much lower than those reported in the same periods last year. Only the Second Service Command reported a rate in excess of 6 per thousand per annum.

VENEREAL DISEASES:

Reported admissions for venereal diseases, excluding cases contracted prior to entry into service, rose during the month to 71.3 per thousand troops per annum.

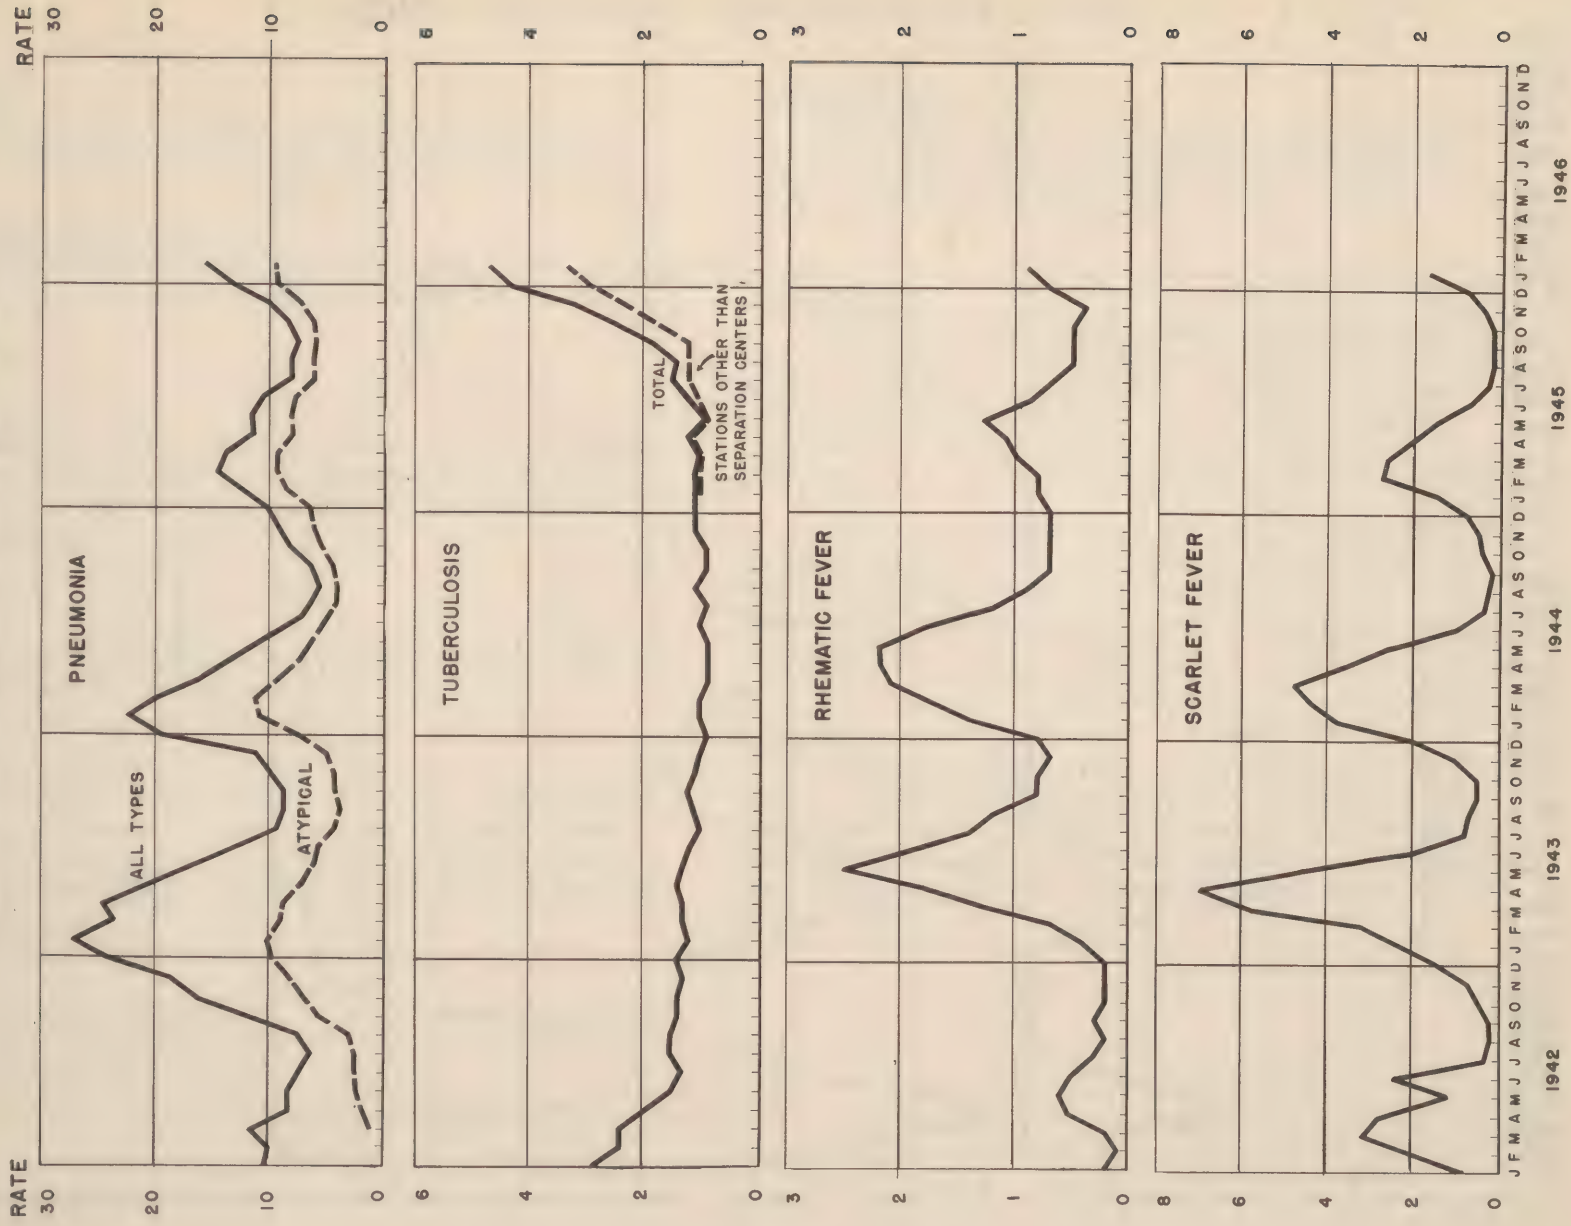

This rate, however, undoubtedly includes many cases which acquired infections in December, during the holiday season, not reported or diagnosed until troops returned to their proper stations in January. Rates for December or January are, consequently, somewhat distorted; an average rate for the eight-week period provides a better approximation of actual incidence in either month. This average rate of 60.2 compares with 60.3 admissions per thousand troops reported in November and 56.4 such admissions in October.

Morbidity represented by venereal EPTS cases was reported at 3.2 per thousand during January as compared with 4.3 per thousand in December. The average weekly number of venereal EPTS cases in January was 124 as compared with 180 in December.

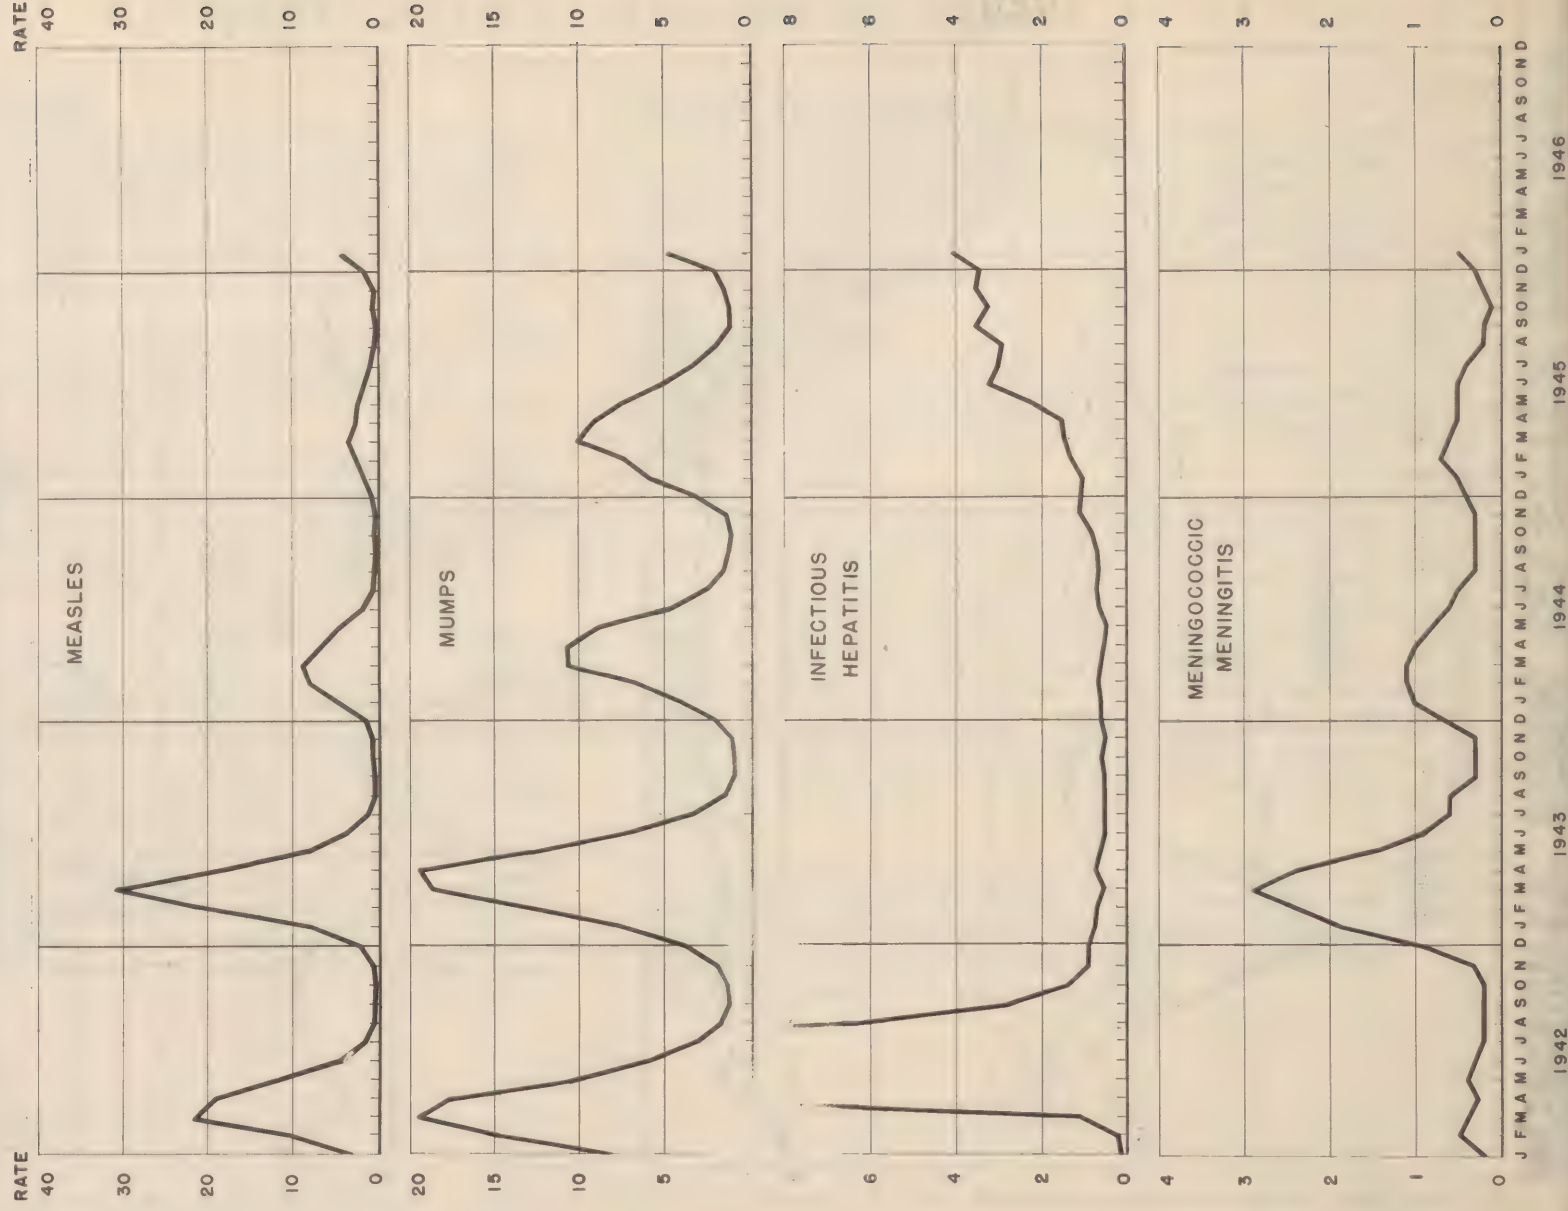

# MORBIDITY FROM SELECTED DISEASES

CONTINENTAL UNITED STATES  
ADMISSIONS PER 1000 TROOPS PER YEAR

# MORBIDITY FROM SELECTED DISEASES

CONTINENTAL UNITED STATES  
ADMISSIONS PER 1000 TROOPS PER YEAR

## COMMENT ON RECENT DEVELOPMENTS (CONT.)

SCABIES:

The admission rate for scabies increased from 11.0 in December to 13.7 per thousand in January.

INFECTIOUS HEPATITIS:

Morbidity from infectious hepatitis was 4.1 per thousand in January as compared with 3.4 in December.

MEASLES:

Morbidity from measles increased to 165 cases per week during January as compared with 63 weekly cases in December. The rate moved from 1.5 to 4.3 per thousand.

MUMPS:

Morbidity from mumps increased from 2.0 per thousand to 4.7 during January.

SCARLET FEVER:

Morbidity from scarlet fever was reported at 1.7 per thousand in January. The Military District of Washington reports a rate of 7.5 per thousand, while a rate of 2.7 is noted in the Seventh Service Command.

MENINGOCOCCIC MENINGITIS:

Morbidity from meningitis was reported at 0.5 per thousand in January.

RHEUMATIC FEVER:

Morbidity from rheumatic fever increased to 0.9 per thousand, from 0.7 in December. The Seventh Service Command reported the highest morbidity from this cause (1.9 per thousand).

TUBERCULOSIS:

Morbidity from tuberculosis was reported at 4.7 per thousand in January, an increase over the rate of 4.3 per thousand in December. The current relatively high level arises in large part as the result of examinations at separation centers which tend to uncover cases which otherwise would be undetected.

As of 25 January there were 3163 cases of tuberculosis remaining under treatment in hospitals in this country. Of the total cases, 1266 were at Fitzsimons General Hospital and 896 at Bruns General Hospital.

MALARIA:

Morbidity from malaria acquired inside the United States remained at 0.1 per thousand in January. The number of cases presumably acquired outside the United States, which were admitted (or readmitted) for treatment in this country averaged about 500 per week.

## COMMENT ON RECENT DEVELOPMENTS (CONT.)

NEUROPSYCHIATRIC DISORDERS:

The annual rate of admission for neuropsychiatric disorders increased from 20.9 in December to 24.0 per thousand in January.

During January there was an average of 631 CDD's per week given to enlisted men classified as neuropsychiatric cases, much lower than the weekly average for December (1056 CDD's per week). The CDD's in January for men with neuropsychiatric disorders represented 20 per cent of all CDD's as compared with 19 per cent in December.

The number of neuropsychiatric cases remaining under treatment as of 25 January was 11,068 or about 300 less than at the end of December. During January, the number of locked ward cases remained approximately the same (2893) while open ward cases decreased by about 4 per cent. Neuropsychiatric cases remaining represented 7.2 per cent of all patients in hospital.

MORTALITY:

Mortality from all causes during January was reported at 1.95 per annum per thousand strength. The mortality rate from disease was 1.13 per thousand in January while the reported mortality rate from injury decreased from 0.80 per thousand to 0.78 per thousand.

It should be noted that the reporting of deaths on Form WD AGO 8-122 is not complete, particularly for deaths from injury, for which the understatement may be as great as 10 per cent (see Special Report on Deaths in 1944 in Weekly Health Report, Volume V, Report No. 27). The mortality rate from injury when adjusted to allow for this under-reporting is about 0.86 per thousand, resulting in an estimated total death rate from all causes of 2.04 per thousand.

NONEFFECTIVE RATE:

The noneffective rate for Army personnel stationed in this country was about 37.5 per thousand in January, as compared with 35.0 per thousand reported for December.
